DWIGHT ANGELO DECENA

Mobile & Web Application Developer · CV

PROFILE

I am a 4th-year BS Information Technology student at National University Dasmariñas, specializing in Mobile and Web Application Development and currently enrolled in the on-the-job training practicum. I build responsive web systems and cross-platform mobile apps end to end: mapping user flows in Figma, modelling the data, building the web and mobile clients, and deploying them. My two main projects are live systems with real user roles, data and workflows — a case-management platform built with a team of four, and a retail system I built alone.

I am looking for a paid OJT or internship with direct software engineering work and a path to full-time employment after graduation. I am also open to freelance projects and collaborations.

EDUCATION

Bachelor of Science in Information Technology — Aug 2023 – Present

Specialization in Mobile and Web Application Development (BSIT-MWA) · National University Dasmariñas, Sampaloc 1, Dasmariñas, Cavite

- Status: 4th-year student, enrolled in the On-the-Job Training practicum
- Capstone: Bridges of Hope, a case-management system for an inpatient recovery facility (team of four)

HONORS & CERTIFICATION

Dean's List — Second Honor
National University Dasmariñas · A.Y. 2025–2026, 3rd term
Rank 6, BS Information Technology – Mobile & Web Applications

IT Specialist — Databases
Certiport / Pearson VUE · awarded Sep 18, 2025 · valid to Sep 2030
Score 914 / 1000 · Credential ID CHrG-Dwzr (verify.certiport.com)

PROJECTS

Bridges of Hope — Inpatient Recovery Facility Case-Management System

CAPSTONE · TEAM OF 4

Role: Lead web & backend developer and repository owner · **Live:** bridgesofhope-delta.vercel.app

Stack: Web — React, JavaScript, Tailwind CSS · Mobile — React Native (Expo), TypeScript · Backend — Supabase (Postgres, Auth, RLS, Edge Functions), Groq API

- **Web portal** for admins, nurses and program staff: admissions workflow, discharge management, ward and room management, patient records, analytics and PDF reports, staff management, messaging and push notifications, and a CMS for the public site.
- **Mobile app for patients' families** (led by a teammate): admission requests, patient progress, reports, visits and appointments, and messages with staff. I contributed the sign-in flows, family tabs and web–mobile parity.
- **Backend and security:** set up the project structure and role-based routing; implemented authentication and security features, notifications and branded email on Supabase with Row Level Security.
- **AI features:** AI-assisted drafting with the Groq API, including referral scanning and patient report drafts for admins.
- **Contribution:** 64 of 216 commits overall (second of four), and the most on the web portal (56 of 120), the Supabase backend (23 of 42) and the admin pages (41 of 66). Wrote the README, PRD and architecture documentation.

Rhayz Kicks — Sneaker Store & Retail Operations System

SOLO — Aug – Oct 2026

Role: Sole designer and developer (all commits) · **Live:** rhayz-kicks.vercel.app

Stack: Web — React, TypeScript, Vite · Mobile — Flutter (Dart) · Backend — Supabase, Laravel 13 REST API (PHP) · Payments — PayMongo

- **Storefront:** product catalogue, cart and wishlist drawers, PayMongo online checkout, loyalty points and vouchers.
- **Back office:** point of sale, inventory and stock movements, delivery-stage order tracking, vendors and purchase orders, staff hours, CMS and a KPI dashboard.
- **Data:** a 27-table Supabase schema documented with an ERD.
- **Mobile app for customers** in Flutter, backed by Supabase and a Laravel REST API for products, cart and wishlist, with realtime sync, order tracking, loyalty rewards and video ads.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Dart, PHP, SQL, HTML, CSS
Mobile	React Native (Expo), Flutter, cross-platform mobile UI
Web	React, Vite, Tailwind CSS, React Router, responsive design
Backend & APIs	Supabase (Postgres, Auth, Realtime, Row Level Security, Edge Functions), Laravel REST APIs
Databases	PostgreSQL, MySQL, relational schema design, normalization, SQL, ERDs, migrations
Tools & delivery	Git/GitHub, Vercel, Expo EAS, Figma, VS Code, Android Studio, Oracle VirtualBox, Wireshark

RELEVANT COURSEWORK

Software Engineering
Systems analysis & design, SDLC, Agile/Scrum, UML diagramming

Database Systems
Relational design, normalization, SQL queries, transactions and security

Mobile & Web Systems
Cross-platform development, React Native, Flutter, state management, mobile UI/UX

Backend Development
RESTful API design, cloud backend services (Supabase), authentication

HOW I WORK

- **Plan:** break the idea into user roles and journeys, then wireframe each screen in Figma before building.
- **Model the data:** design the tables, relationships and access rules first so web and mobile share one source of truth.
- **Build:** responsive web apps in React and TypeScript and cross-platform apps in React Native or Flutter on the same backend.
- **Ship & iterate:** deploy web apps on Vercel and mobile builds through Expo EAS, with every change versioned in Git and CI lint and build checks.

STRENGTHS

Problem solving — tracing bugs to their root cause and checking fixes against the data.

Documentation — READMEs, PRDs, architecture notes and ERDs.

Collaboration — Git branching and merges in a four-person capstone team.

Self-learning — learned and used Flutter, Laravel and PayMongo to ship a solo project.
